While turbocharged MR2s from that year originally came with dash-mounted boost gauges from the factory, the fact that our car's original Gen2 3SGTE engine had been swapped for a more technologically complex Gen4 3SGTE engine by Prime Performance means that the retention of the factory boost gauge is not possible. In any case, the factory boost gauge isn't even graduated numerically, and we needed something more precise than "low" and "high."

The relay contacts are only used in the +12V side of the circuit. But the relay coil, which is what operates the relay (opens and closes the contacts) must be connected to both +12V and ground in order to energize the coil. The CO relay is a multi-coil relay that is operated from different circuits, in 2 different modes. In "start mode" it gets a +12V signal at terminal STA, and is grounded at E1.

Hey All, I am considering selling performance caps for the MK2 turbo, 3SGTE motor. Any one who has owned one for a while knows, that without changing your cap and plugs every 5,000 miles, you are not at optimum performance and the distributor cap, is the weak link to the ignition system on the 3SGTE. No one that I have ever seen makes a performance cap for the MR2 with brass or copper terminals.
