Software Engineering
simply depicts interaction between objects in a sequential order i.e. the order in which these interactions take place. We can also use the terms event diagrams or event scenarios to refer to a sequence diagram. Sequence diagrams describe how and in what order the objects in a system function.

Diagrams are

interaction diagrams that detail how operations are carried out. They capture the interaction between objects in the context of a collaboration.

Sequence Diagrams are time focus and they show the order of the interaction visually by using the vertical axis of the diagram to represent time what messages are sent and when.

A sequence diagram is a good way to visualize and validate various runtime scenarios.

These can help to predict how a system will behave and to discover responsibilities a class may need to have in the process of modeling a new system.
